Figure 1 shows the results of the first two steps of the analysis. The first step was to identify the variables that were significantly associated with the outcome variable. The results of this step are shown in Table 1. The variables that were significantly associated with the outcome variable were age, sex, education, income, and occupation. The second step was to identify the variables that were significantly associated with the outcome variable, controlling for the other variables in the model. The results of this step are shown in Table 2. The variables that were significantly associated with the outcome variable, controlling for the other variables in the model, were age, sex, education, income, and occupation.
